

1. Bites: ChatGPT4 response (App Flow_ caldwell.ben.bites_1.mhtml)

There is an inconsistency in the behavior of the application when clicking the "Send Email Recipe" button, resulting in the app crashing. This is unexpected as typical operations, especially those like sending an email which should be standard functionality, should not cause the application to crash. This indicates a flaw in either the button's functionality or error handling within the app that needs to be addressed.

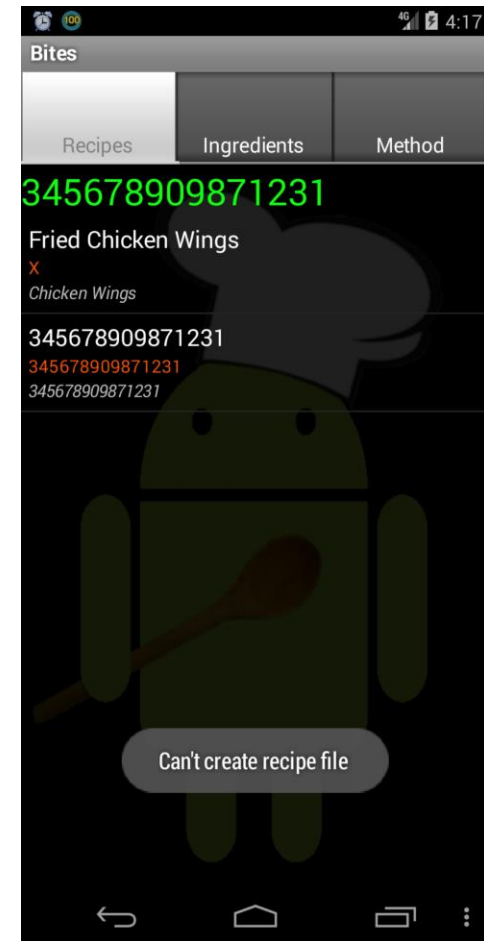

Bugs Triggered Flow

Create several "Recipes", and long click on anyone

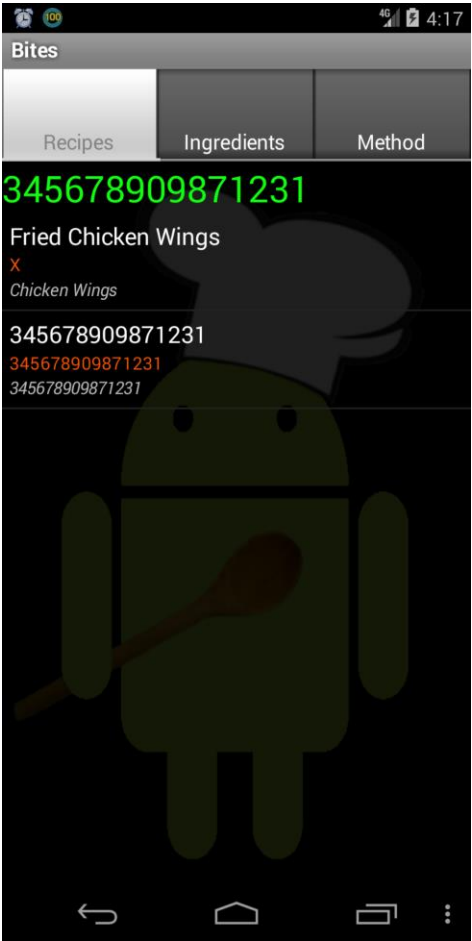

Click "Send Email Recipe"
