

5. Tippytipper: ChatGPT4 response (App: tippy_1.1.3_oracle_0.mhtml)

Yes, there is a logical error. The output after the "Click Round Up" action incorrectly shows an inflated tip percentage of 9900.0% instead of rounding up the tip value in a reasonable manner. This results in a tip amount of \$0.99 for a subtotal of \$0.01, which is incorrect behavior for a rounding operation intended to adjust the tip to the nearest whole number.

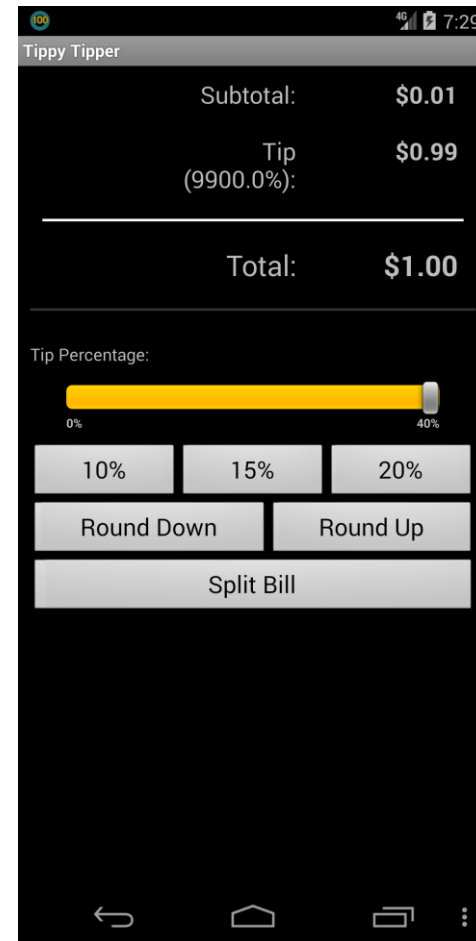

Bug triggered Flow:

Click "1" and then "OK"

click "Round Up"

Tip amount is 9900.0%

When the bill amount is low, the "round up" will cause an abnormally high tip rate, which is significantly greater than its limit of 40%.
