

24.RandomMusicPlayer: ChatGPT4 response (RandomMusicPlayer_oracle_0(76).mhtml)

Based on the sequence provided and the screenshot you uploaded, there is a UI error. The screenshot displays the message "No song to play :-(
which does not correspond to any expected output text as per the sequence you described. Throughout your described sequence, there is no mention of an error message or a condition leading to this state being displayed on the screen.

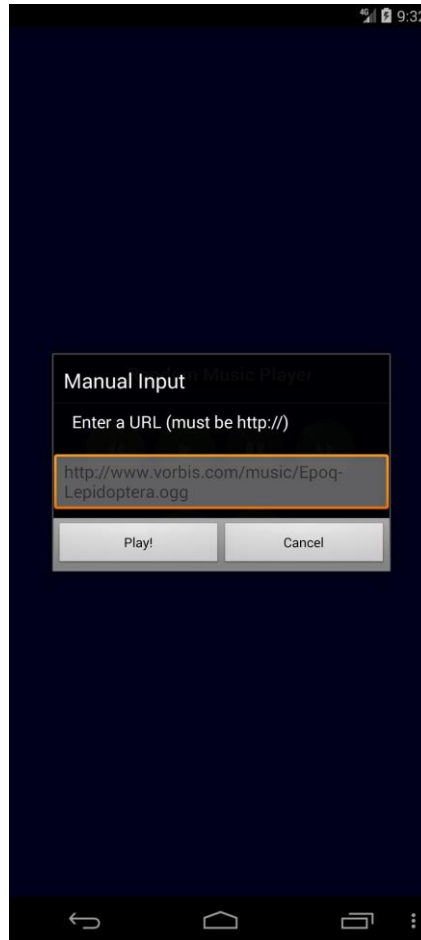

The actions described indicate manipulation of buttons for play, cancel, and menu interactions but not the display of an error message related to song playback, which suggests a discrepancy between expected behavior and the app's actual response in the screenshot.

Final Decision: Yes, there is a UI error in the screenshot, as the error message displayed does not match any given output in the sequence of actions.

Click “A screenshot of the same "Random Music Player" app. The play button is now highlighted in green, indicating it is active. Below the control buttons, a grey rounded rectangle contains the text "No song to play :(". The status bar at the top shows the time as 9:32.

It shows “no song to play”

However the URL is valid music source.
