

## 18. KeePassDroid: ChatGPT4 response (passwordmanager\_oracle\_0(28).mhtml )

Yes, there is a UI error in the screenshot. The KeePass database filename field contains the literal string “input text‘{.345678909871231,” which appears to be a user input error or a bug in how the text is displayed or handled. It does not correspond to a valid file path or filename and hence, the error message "Database format not recognized." is being shown. Additionally, the filename appears to be truncated, which could indicate that the full path is not being displayed properly.

Final decision: UI error detected due to incorrect and possibly truncated input in the filename field.

Click “open”

Input random text in placeholder

Click “OK”

Error message pop up.
