3. Filexplorer: ChatGPT4 response (App Flow_ fileexplorer_oracle_0.mhtml)

Yes, there is a logic error.

The reason is that clicking on various filesystem entries such as 'mnt', 'cache', 'storage', 'system', 'sdcard', 'ueventd.ranchu.rc', 'etc', 'config', 'sys', 'd', 'ueventd.rc', 'acct', 'vendor', 'ueventd.goldfish.rc', 'scroll', 'fstab.goldfish', 'init.trace.rc', 'fstab.ranchu', 'default.prop', 'init.rc', 'dev', 'data', 'init.environ.rc', 'file_contexts', 'init', 'root', 'init.usb.rc', 'init.ranchu.rc', 'init.goldfish.rc', and 'root' did not result in any change to the page structure or navigation, which is unexpected behavior when interacting with file system directories or files in a file explorer application. The output structure remained the same after these actions when it should have displayed the contents of the clicked directory or file.

Bug trigged Flow:

After clicking any button, the view remains the same, which means all the buttons cannot function properly.
