17.Jamendo: ChatGPT4 response (com.teleca.jamendo_38_src_oracle_0(64).mhtml)
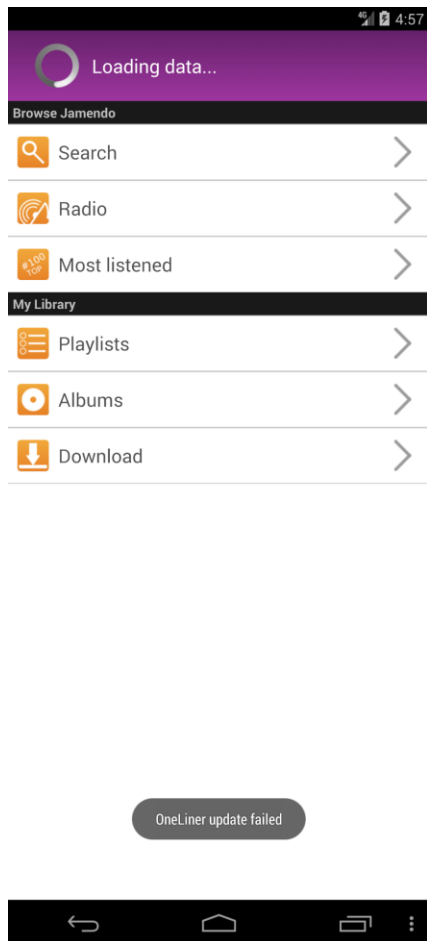

Based on the provided sequence and the screenshot, the final page should display options like "Browse Jamendo", "Search", "Radio", "Most listened", "My Library", "Playlists", "Albums", and "Download" as clickable buttons with respective content descriptions and other buttons like "Loading data..." corresponding to each section.

The screenshot provided shows the "Loading data..." message, which is consistent with the expected output. However, there is an error message at the bottom saying "OneLiner update failed". This error message is not mentioned in any of the provided sequences, indicating a potential discrepancy or an actual error in the app's UI.

Additionally, based on the actions leading up to this point, there were several instances where the action redirected to an empty page, and the user had to click back multiple times. However, there's no indication in the screenshot that such redirections occurred, as the screenshot shows the main page with options, which seems to be loaded correctly, except for the error message.

Therefore, yes, there is a UI error, as there is an unexpected error message "OneLiner update failed" that does not correspond to the expected output text from the given sequence.

Final decision: There is a UI error due to an unexpected error message.

Error message on restart the app
