8. Translate: ChatGPT4 response (App_ Translate_oracle_0.mhtml)

Yes, there is a logical error. The error occurs when "Click Catalan" action is repeated. After the first click on "Catalan", the output structure displays additional language options like 'Chinese', 'Czech', 'Dutch', and maintains 'English' and 'Catalan'. However, when "Catalan" is clicked again immediately after, the output reverts to showing fewer options ('English', 'Catalan', 'Translate'), and displays an 'Error:Translation failed' message, which suggests an issue with the application state not being maintained correctly or a failure in handling repeated clicks on the same language option consistently.

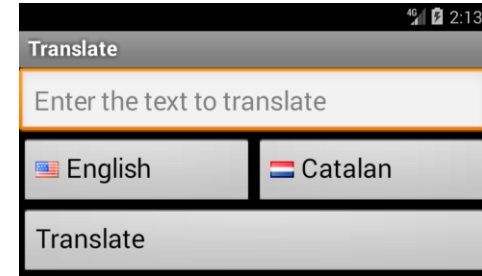

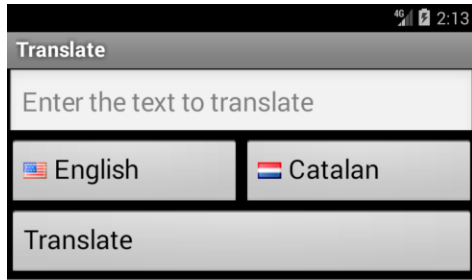

Open app and click "Dutch"

Click "Catalan"

Click "menu"

Enter the text to translate
